

## REMARKS

The foregoing amendments of the specification and claims merely correct obvious errors. Other than for compound 44 and, in in Table 2 and claim 34, compound 177, there existed two types of minor clerical errors in the compound names: 1) the substituted nitrogen identifiers were not superscripted (e.g., N-2-... in compound 2 rather than N<sup>2</sup>-...) and (2) a number of compound names contained a superfluous ' (single quote) preceding the names (e.g., compounds 21 - 27). Rather than using strikethrough or double-brackets to indicate the deletions, which may not have been easily discernable among the brackets appearing in the chemical names, the applicants have amended the specification and claims by deleting each chemical name entirely, replacing it with the same name in which, as the case may be, the identifier on the nitrogen substituent(s) is properly superscripted or the superfluous single quote is omitted.

With regard to compound 44, it is noted that the name in the tables does not correspond to the chemical structure displayed. To rectify this error, the applicants have deleted the compound name and remove compound 44 from Table 2.

With regard to claim 177, an error message was automatically generated where the name should have been. The correct name of the displayed structure has been inserted.

As the foregoing amendments merely correct obvious clerical errors, no new subject matter has been added by the present amendments.

If there are any questions or comments regarding this Preliminary Amendment or application, the Examiner is encouraged to contact the undersigned attorney as indicated below.

Respectfully submitted,

Date: August 30, 2007
